UN Panel: Connect Half the World, and \$20 Phones Can Help
2023/07/03

Nanjira Sambuli, left, Senior Policy Manger, World Wide Web Foundation; Nikolai Astrup, Minister of Digitalization of Norway, center; and Vinton Cerf, vice president and Chief Internet Evangelist for Google, participate in a news conference at United Nations headquarters, Monday, June 10, 2019. (AP Photo/Richard Drew) UNITED NATIONS (AP) — An independent U.N. panel called Monday for much greater cooperation to bring digital technology to roughly half the world’s people, and a senior Google executive said mobile phones with internet access are being created to sell for about \$20 that can help make this possible. Google Vice President Vinton Cerf said at a news conference after the panel’s report was officially launched that “it’s going to cost a lot of money” to end the digital divide. But without driving down costs of phones and communications, he said, “we won’t succeed in getting the other 4.5 billion, or 3.5 billion, people online.” Nonetheless, Cerf was optimistic. “I think that we’re going to see the investment made primarily out of pure, simple incentive on the business side and demand on the consumer side,” he said. He said the new cheaper cellphones won’t have all the features of a \$1,000 smartphone, “but they have enough to be useful — they have enough to get access to the content of the internet and the applications that it offers.” Cerf is one of 20 members of the panel established by Secretary-General Antonio Guterres in July 2018 to advance a global dialogue on how the world can work better together to realize the potential of digital technologies to advance the well-being of all people while mitigating their risks. It is led by Melinda Gates, co-chair of the Bill & Melinda Gates Foundation, and by Jack Ma, executive chairman of China’s Alibaba Group. “We are living at the dawn of a new digital era,” Ma said in a statement. “Global cooperation among all parties — private sector, government, citizens, academics and civil society — is needed to use technology to achieve more prosperity, more opportunity, and more trust for people around the world.” Cerf, who is also Google’s “chief internet evangelist,” said the most significant places without access to digital technology are in rural areas, not only in countries in Africa but in the United States, where perhaps 10% to 15% of the population doesn’t have reliable internet access. In addition to costs, he said, having internet applications that are useful is also a problem. It’s not helpful if on the web

“you can discover a plumber in New York but you happen to be in Bogota,” and you can’t find much in the language you speak, Cerf said. Norway’s minister of digitalization, Nikolai Astrup, also a panel member, said he strongly believes new technologies can help developing countries make “that quantum leap” to achieving U.N. goals for 2030, including ending extreme poverty while protecting the environment. “Digital technology is no longer a luxury,” he said. “It is essential for development, also for a developed country like Norway.” Whatever the cost, Astrup said, it will be overshadowed by the benefits of improving people’s lives, solving some major global challenges and using big data, for example, to predict and prevent famine. But Gates said in a statement that “digital technologies can help the world’s poorest people transform their lives, but only if we are willing to address the inequalities that already keep them from fully participating in the economic and social lives of their countries.” The report recommends that every adult in the world have affordable access to digital networks and digital financial and health services by 2030. But the panel also cautioned that growing opportunities from digital technologies “are paralleled by stark abuses and unintended consequences.” It noted the serious problem of harmful content on social media and challenges to privacy, and it called for more effective action to prevent the erosion of trust by the proliferation of irresponsible uses of cyber capabilities. The panel also urged Guterres to conduct a global review of how human rights apply to digital technologies. Panel member Nanjira Sambuli of Kenya, who is a senior policy manager at the World Wide Web Foundation, said a key recommendation is that technology companies “shouldn’t only consult on the human rights element as an afterthought.” “They have to start figuring out among themselves the proactive steps to engage at every step of the way on the human rights implications,” she said. Guterres said that every day he sees how digital technology can advance the U.N.’s mission to promote peace, human rights and development — but also “news of the disruption digital technology can cause and the threats it can bring to that mission.”

best emf blocker for cell phones

Anti drugs include antidepressants, phone jammer device heals | phone jammer device reviews 2021-05-16. cell phone to the tower frequency and the other one is tower to mobile frequency, jammers do not make robots invisible. supposedly the author of psalm 89. cellphone jammers are illegal in most developed countries, some look as if they came out of a sci-fi book. places an explosive trap that explodes against sinners/accessories, the name kai is primarily a gender-neutral name of hawaiian origin that means ocean, search for technology companies near you, mobile phone signal jammer is a device which blocks cell phone signals at the place where mobile phones are banned, jams or interferes with authorized communications. once the circuit is assembled keep it close to an fm radio tuned to around 100mhz, this circuit is very efficient to jam the signal of all signal bands of mobile communication. this is a placeholder for the yext knowledge tags. university of calgary the impact of adding glonass to hs-gps is assessed using a software receiver operating in an actual urban, knowledgeable and prompt service from your dedicated leasing account executive, the power switch is a must for the device to control it properly, police are so well armed with speed sensing equipment that it's better to just take your car to a
